

BIO SUSTAINABLE™ SIX-PACK RINGS

Our BioSustainable™ Marine-Biodegradable Six-Pack Rings offer a new and an environmentally responsible way to pack drinks.

Not all compostable bioplastics are marine-biodegradable due to lower temperatures, and limited bacteria and oxygen availability in saline ocean waters. Even fastest marine-biodegrading products may retain their strength for months presenting entrapment danger to aquatic life.

Addressing the challenge Singular Solutions offers a unique, patent-pending packaging, which combines various renewable marine-biodegradable bioplastics into a strong and durable for everyday use multi-layer product.

Upon discarding into marine waters, BioSustainable™ Marine-Biodegradable Six-Pack Rings break apart within 24-48 hours into extremely thin layers that start biodegrading and losing integrity within days, posing no danger to wildlife through strangulation or ingestion.

Unlike regular plastics, BioSustainable™ Marine-Biodegradable Six-Pack Rings safely biodegrade in marine environment without releasing microplastics or harmful chemicals and can be digested by aquatic life.

BioSustainable™ Marine-Biodegradable Six-Pack Rings is also suitable for industrial and home composting.

Please contact us to try our new environmentally friendly BioSustainable™ products at sales@SingularSolutionsGroup.com or call at (705) 817-7682.
